1985 FIRE SITUATION

STATE OF IDAHO:

The 1985 fire season was one of the worst ever experienced in the Intermountain Region.

January was one of the driest and coldest on record, as strong high pressure continued along the west coast. Even in the higher elevations, which normally receive more than 4 inches, precipitation totals were well under an inch.

High pressure began to break down during February, allowing a few storms to enter the Intermountain Region, but precipitation for the month still averaged only about 70-90% of normal. Temperatures remained very cold, averaging 7-11 degrees below normal for the month.

Most precipitation in March fell during two storm periods, one at the beginning of the month and another at the end. Snowpacks at the end of the month varied from 80-100% of normal in most areas.

April was very dry and warm throughout the area. Only during the third week of the month did any appreciable amounts of precipitation fall. Precipitation totals for the month were only about 30-50% of normal in most locations. However, a few places were even drier, such as Salmon with only 20% of normal.

May was a typical spring month, bringing periods of warm, dry weather followed by cool, wet conditions. Precipitation totals were generally between 90 and 130% of normal, with most of the rain falling from thunderstorms. A few locations did remain dry, though. The Magic Valley of southern Idaho was one such area, with Twin Falls reporting only 50% of normal.

June was very dry, with rainfall ranging from only 10% of normal on the Challis and Salmon National Forests to about 60% of normal on the Rock Springs BLM. Most areas, though, were between 20 and 40% of normal.

The first ten days of July followed the hot, dry trend set in June. From the 10th through the 23rd, wet thunderstorms developed nearly every afternoon and evening, but rainfall amounts were light. The 24th through the 27th saw a drier northwesterly flow of air develop over the area, which pushed the wet thunderstorm activity east. A major change in the weather pattern then started, which eventually brought a much-needed respite to the severe fire season. Rainfall at McCall on the 30th ended a stretch of 51 dry days that started June 9th.

High pressure rebuilt over Idaho August 4 but was transitory. A series of cold fronts producing light rain occurred August 10th through August 19th. Strong high pressure and a warm, very dry air mass dominated the weather through the 30th. During this time, high temperatures in the 80's and 90's, coupled with minimum humidities in the teens and subteens, resulted in considerable drying of fuels, which led to a number of project-size fires.

September was unusually wet and cold, especially during the first three weeks. Boise recorded it's 3rd coldest and 7th wettest September since 1864, while Ketchum had its wettest since 1940 and McCall had the 2nd wettest since 1916. Precipitation for the month was generally 200-350% of normal.

The first 5 days of October were dry and mild. A cold front moved into Idaho on the 7th bringing with it rain, snow, and much colder temperatures. The snow level dropped to about 5,000 feet and McCall received approximately an inch. Fire season finally came to an end.

STATE OF NEVADA:

1985 ranked as one of the worst fire seasons in Nevada in recent history. Weather played a significant role with the fire season preceded by a drier than normal winter and an unusually dry spring. A high occurrence of "dry" thunderstorms with little rainfall and numerous lighting strikes caused a majority of the state's fires.

With the exception of March, temperatures were considerably above normal during the spring months. In fact, April was one of the warmest and driest Aprils for Nevada on record. Temperatures recovered to near seasonal normals during May over all but southern Nevada where averages continued 2-4 degrees above normal. Unfortunately, precipitation continued well below normal. During the period from late March through early June, Reno recorded 65 consecutive days with no measurable rainfall.

Weather conditions during June followed the trend of the spring months with warmer and drier conditions throughout the state. Temperatures averaged between 2-7 degrees above normal statewide. Rainfall continued well below normal with several stations reporting no rain at all.

In July, rainfall amounts returned to near normal across much of Nevada, however, drought-like weather continued in the west. Temperatures were above normal statewide averaging between 4 and 7 degrees over normal across northern Nevada. All-time records were tied in southern Nevada with 122 degree heat in the Laughlin area.

Drought like conditions continued in August. Rainfall was almost non-existent with just over two-tenths of an inch at Mountain City topping the list of most rainfall in the state. Above normal winds for the month only added to the critical fire danger that existed over much of the west.

September brought some relief as rains returned to the parched western portion of the state. In fact, most of the northern half of Nevada received greater than normal rainfall. Temperatures were the big news story of the month with well below normal readings statewide.

STATE OF UTAH:

June was a warm and dry month with only one major storm system during the last week. June continued the warm trend established the previous months of April and May.

July was hot but moist with above normal rainfall across the state. Many areas reported the wettest July on record.

August, like June, was warm and dry with spotty precipitation. The period June through August registered the warmest monthly temperature averages on record.

September was wet and cool with precipitation totals for many areas running over 200% of normal. It also broke the warm June through August trend.

October was a month with near normal temperatures and above normal precipitation. A major fall storm encompassed the state during the first week.

LARGE FIRE OCCURRENCE

There were 23 Class D or larger fires that burned in 1985. These 23 fires accounted for 98 percent of the total area burned.

ATTAINMENT:

In 1985, 93 percent of all fires were controlled at 10 acres or less in size on 33 million acres of Forest Service protected lands. Less than 2 percent of the fires burned 100 or more acres each.

1985
PERSONNEL EMPLOYED ON
FIRE MANAGEMENT ACTIVITIES

SMOKEJUMPER AND HELITACK REPORT

CALENDAR YEAR: 1985

REGION: Four

INSTRUCTIONS:

Item 1 - Permanent bases only. Exclude temporary satellite bases.
Item 2 - Planned strength of unit. Do not include non-fire goers.
Item 3b - Exclude fires where initial attack is by jumpers or crewmen.
Item 5 - For smokejumpers report on fires jumped only. For helitack report only on fires where travel is by helicopter. Include travel time to and from fires.

ITEM	SMOKEJUMPERS		HELITACK
	Home Region	From Other Regions	Crewmen
1. Number of bases	1		11
2. Number of jumpers or crewmen	78		88
3. Number of fires attacked or jumped			
a. Initial attack	86	15	179
b. Follow-up	4	4	109
c. Total	90	19	288
4. Number of person-jumps to fires	566	101	0
5. Person-days on fires	2,303	224	2,862

Remarks *(Use for explanatory notes, if necessary)*

The McCall smokejumpers made an additional
148 person-jumps - BLM - Alaska
35 person-jumps - Region 1
70 person-jumps - Region 5
17 person-jumps - Region 6

5100-7 (Rev. 1/66)

COOPERATIVE EFFORTS

The Ashley National Forest has continued with the cooperative agreements with the Uintah Basin Wildland Fire Control Agencies. These agencies include:

1. BIA - Uinta/Ouray Indian Agency
2. State of Utah - (Uintah, Daggett, and Duchesne Counties)
3. NPS - Dinosaur National Monument
4. BLM - Vernal District
5. USFS - Ashley National Forest

The Utah State Lands and Forestry Division, the Bureau of Land Management, and the Ashley National Forest continued the Interagency Dispatch Center. This center is working very well.

The Rock Springs, Wyoming BLM, and the Flaming Gorge Ranger District, Ashley National Forest, continued to work under their initial attack agreement.

The cooperative effort between the BLM, Grand Teton National Park, and the Bridger-Teton National Forest in supporting one helicopter continues to work well.

The Challis National Forest, the Idaho Falls BLM, and the Salmon BLM continued their protection agreement to suppress wildfires. Cooperation continues to remain excellent.

The Custer County sheriff provided the Challis National Forest dispatcher night coverage for the Forest this season via a remote radio hookup.

The Interagency Dispatch Office located in Cedar City, Utah, continued to operate smoothly giving advantages in both savings to government and no lost time in waiting for detailers to arrive to help in overload situations. Agencies included in this center are:

1. National Park Service
2. Cedar City BLM District
3. Dixie National Forest

1985 was the eighth consecutive year that the Fishlake National Forest has cooperated successfully with the Richfield District of the Bureau of Land Management in the operation of the Richfield Interagency Dispatch Office. This has enabled both agencies to work together as an effective fire fighting force.

The Fishlake National Forest cooperated with the Utah Division of State Lands and Forestry on an initial attack offset agreement in Sevier County.

The Humboldt National Forest, Elko District BLM, and the Nevada Division of Forestry operated in a new interagency dispatch office. As a result, resources were better utilized this fire season.

The initial attack agreement between the Nevada Division of Forestry and the Humboldt National Forest continues to operate very well.

The Salmon National Forest and the Salmon BLM joint Interagency Dispatch Center located in Salmon, Idaho, operating since 1982, had their busiest year ever. Cooperation was excellent and fire resources were better utilized than ever before.

Cooperation between the Salmon, Payette, Bitterroot, and the Region One Fire Center in Missoula continues to remain excellent.

Cooperation between the Sawtooth National Forest and Shoshone and Burley BLM Districts continues to be excellent. Continued discussions and evaluation on a consolidated dispatch organization is still being pursued.

The West Yellowstone Interagency Center has been extremely helpful and made every effort to provide excellent service. The National Park Service, BLM, and Forest Service (Region's 1 and 4) are involved in this operation.

Excellent cooperation continues to exist between the Targhee National Forest and the Idaho Falls BLM. Resources are shifted between each agency as needed to provide initial attack and support capabilities.

Interagency cooperation continues to increase in effectiveness among the Toiyabe and adjacent agencies. Emphasis towards an interagency approach to solving common fire management problems has been heightened. The development of the Sierra Front ICS Teams will continue this effort.

Cooperation between the BLM, both in Nevada and California, and the Toiyabe National Forest has continued in excellent fashion. The Interagency Helicopter Operation at Bridgeport was renewed for the 12th consecutive season. Each agency finances their own personnel under existing cooperative agreements. There have been no accidents or serious injuries in those twelve seasons.

Interagency cooperation continues to increase in effectiveness among the Toiyabe National Forest, the Nevada Division of Forestry, the California and Nevada BLM Offices, the California Division of Forestry, and the Reno Fire Weather Office. The Minden Tanker Base, the Interagency Dispatch Office, the Interagency Team members for the Sierra Front Teams, and the Coop Agreement along the Carson Range of the Sierra Front are examples of this effort.

The Salt Lake Interagency Fire Center located in Salt Lake City continued cooperative operations during the 1985 season. Agencies included in this center are:

1. State of Utah
2. Salt Lake BLM District
3. Uinta National Forest
4. Wasatch-Cache National Forest

This year was a first in Region 4 for converting to the interagency class one team concept. Cooperation was outstanding. Our class one overhead teams consisted of personnel from the following agencies:

1. United States Forest Service
2. Bureau of Land Management
3. National Park Service
4. State of Utah
5. State of Nevada

Cooperation between the Idaho National Guard and the Boise National Forest was outstanding. All time records were set by the National Guard in total resources committed to fires.

The Payette received assistance from Forest Service personnel from Region's 1, 2, 3, 4, 5, 6, 8, 9, as well as other agencies like the BLM, BIFC, National Park Service, Department of Natural Resources, BIA, National Weather Service, FAA, Idaho Department of Lands, CDF, Job Corps, Utah Department of Forestry, National Guard, Idaho and Valley County Sheriff Departments. Support personnel also came in the form of emergency fire fighters, YACC's local logging operators and volunteers. The community of McCall also provided food, lodging, and other commodities necessary to support a small army.
